

## Southern Soda

### Cheerwine

L.D. Peeler created Cheerwine in 1917 in Salisbury, North Carolina amid a sugar shortage. His drive to start his own soft drink led him to a salesman from St. Louis who sold him a wild cherry flavor that blended well with other flavors. With a burgundy-red color and cheery disposition, the name "Cheerwine" simply made sense. The taste sensation known as Cheerwine was born. ... 4

### Cannonborough - Honey Basil or Raspberry Mint or Grapefruit Elderflower

Free from artificial preservatives, each soda is made entirely from fresh fruits, herbs, and culinary spices. The sodas are force carbonated and bottled in small batches, resulting in a unique sparkling beverage as interesting as it is refreshing.. 4

## Amendment XVIII

*Party like it's January 17, 1920, or as many imbibing intellectuals know it, Prohibition!  
Inspired creations without the hangover.*

**Fall Cooler** ..... 5  
Hibiscus Tea, Cantaloupe, Lemon, Sea Salt

**Bummer Summer** ..... 5  
Pear Shrub, Tonic, Lime

**Temperance Of Tansy** ..... 5  
Apple Brown Sugar, Mexican Coke, Garden Tansy\*\*

## Husk Creations

Depending on the time and place, we allow the bounty of what's in front of us to influence our drinks. Our bar is outfitted with an ever-changing menu rooted in classic cocktails and tippling traditions, all while mirroring the restaurant's commitment to seasonality.

A stroll through the garden, talk with a farmer or smell of what's cooking in the kitchen can conjure up a moment of inspiration. We try to take those moments, the smell, the thought, the revelation and put it in a glass for our friends and family to taste. Cheers!

# Husk Wine List

*As an agricultural product, grapes show a breadth of characteristics from the place in which they are grown. Starting from the ground up, the soil is the foundation that creates the backbone for all grapes. Detailed below are the profiles of each soil type and the particular complexities they may add to a wine.*

## Soil Types

**A = Alluvial (sand, clay, gravel, silt/loess, loam)** soils are blends that have good water and nutrient retention, which can translate into a more opulent style of wine. Throughout the world, these are the most prolific vine soils and a good place to look for more fruit-forward, approachable and juicy wines.

**S = Sedimentary (limestone, sandstone, silex/flint)** rock soils are made from solidified mineral or organic deposits. These soils work like a sponge, wicking water away and storing it as reserves for the vines when water is scarce. Highly valued in cool climates because of its heat reflection capabilities, this is a good place to look for bright, balanced, mineral-driven wines and bubbly!

**M = Metamorphic (slate, schist, gneiss)** rock soils are formed under pressure from another type of rock, with many color variations and mineral make-up. Dark colors retain and radiate heat, contributing to ripening, helping develop color and more interesting flavors in grapes. Wines can have an underlying mineral quality and can be quite powerful, yet balanced.

**I = Igneous (volcanic, basalt, pumice, granite)** rock soils are formed by lava flows above and below the earth's surface. Volcanic soil is formed from molten lava and ash deposited from the earth's surface. Granite is a plutonic rock formed deep under the earth's surface. Resulting wines are typically powerful with an earthy, ashy element, often savory and complex.

## Sparkling Wine

Soil		Glass	Bottle
